

**30 YEARS OF EXPERIENCE IN HULL,
MACHINERY, AND CARGO SURVEYS.**

About us

Seatech Marine & Cargo Surveys was founded in 1993 in Vitória, Espírito Santo, Brazil, with the purpose of performing high-quality services and meeting the specific needs of our clients at competitive prices.

Seatech offers a comprehensive range of services, including pre-loading (steel products, iron ore, fertilizers, grains), on/off-hire bunkers and conditions, bunker quantity, hold's grain cleanliness condition, and draft surveys, which are among our most requested services.

What we can do to improve your business

Holds cleanliness condition survey

Critical for preparing holds for grain or sensitive cargoes, often requiring special authorization for vessel access at anchorage areas.

Draft survey

Accurately calculates cargo weight changes, essential for verifying cargo quantities for various stakeholders.

Loading survey

For steel and general products. Ensures accurate assessment of cargo condition pre-shipment, particularly for steel products and machinery, preventing potential disputes.

Iron ore loading

Ensuring safe loading of Group A cargoes with TML and MC certificates, ensuring compliance with international safety standards.

On/off-hire bunker & condition surveys

These surveys determine vessel status during charter transitions, crucially important for owners and charterers alike.

Bunker quantity survey

Essential for overseeing vessel fuel bunkering, ensuring accurate fuel delivery and advising in disputes.
